

TFT Meta Guide Methodology and Answering Standard

Source: <https://www.metatft.com/units>

Purpose and User Intent

This methodology document explains how the Gaming Meta Guide should combine patch notes, champion build guides, item mechanics, and statistics-oriented meta sources. It is a visible reference document for retrieval and evaluation. It should help the assistant answer practical player questions without sounding like a hidden system prompt.

The target user is a Vietnamese TFT player who wants fast strategic advice. Common queries include "Jhin len do nao", "Bard dung Shojin hay Mu Phu Thuy", "Shen co cam Gang Dao Tac duoc khong", "do nay thay bang gi neu thieu manh", and "build nay con hop patch khong".

Evidence Types

Official patch notes explain balance changes and should be used for freshness-sensitive claims. Item mechanics references explain why an item type fits a role. Champion build guides provide specific item packages for named champions. Meta statistics can suggest which item combinations are performing well in recent ranked games.

These evidence types should not be mixed carelessly. A patch note can justify that a champion or item changed, but it may not provide the best build. A community or statistics guide can recommend items, but it should not be framed as official Riot policy. The answer should make this distinction clear through citation.

Retrieval Priority

For a champion item question, retrieval should prioritize exact champion chunks first. If the query says "Jhin len do nao", the Jhin guide should outrank generic item mechanics. The final answer can then use item mechanics to explain why the recommended items make sense.

For a vague query like "tuong nay len do nao", the assistant should ask for the champion name unless previous conversation memory contains one. If the query mentions only an item, such as "Vo Cuc Kiem dung cho ai", retrieval should search both the alias table and champion guides containing that item.

For patch questions, retrieval should include patch notes or the freshness guide. If no current patch evidence exists, the assistant should not pretend the data is current.

Answer Format

Recommended Vietnamese answer format: "[Champion] nen len [item 1] + [item 2] + [item 3]. Neu gap [condition], co the thay [alternative]. Ly do: [role-based explanation]." The answer should be short enough for gameplay use but still cite the source document.

Example: "Jhin nen len Vo Cuc Kiem + Kiem Tu Than + Diet Khong Lo. Neu lobby nhieu tanker giap cao, thay mot slot bang Cung Xanh. Ly do: Jhin la carry sat thuong vat ly tuyen sau nen uu tien sat thuong, chi mang va xuyen giap [Jhin TFT carry item build guide, 2026]."

Patch Freshness and Uncertainty

TFT changes frequently. A recommendation should include patch context when the source includes it. If the user asks for the newest meta and the indexed dataset does not include the newest patch note, the assistant should state that it cannot verify the newest state from the current data.

Build recommendations should be treated as flexible. Available item components, augment choices, team traits, enemy resistances, champion star level, and carry assignment can change the optimal

item set. Good answers should include replacement conditions instead of giving a rigid list.

Conflict Resolution

If two retrieved guides conflict, prefer the guide with newer patch context. If patch context is equal, present both alternatives and explain the condition for each. For example, one build may be better against tanks while another is stronger against squishy boards.

If the dataset has no guide for the requested champion, the assistant should not invent a three-item build. It may provide a role-based template only if retrieved context identifies the champion role. Otherwise it should ask for a champion name, a patch, or a source document.

Evaluation Questions

Suggested golden dataset questions include: "Jhin len do nao?", "Bard nen dung Shojin hay Mu Phu Thuy?", "Shen cam Gang Dao Tac on khong?", "Cung Xanh dung khi nao?", "Neu khong co Diet Khong Lo thi thay gi cho Jhin?", "Tai sao build TFT phai theo patch?", and "Tuong nay len do nao?"

These questions test exact champion retrieval, alias matching, reasoning, citation, and patch awareness.
